What is API2Cart?

API2Cart is a service that makes it possible to connect your eCommerce software to 40+ shopping platforms and marketplaces via a unified API. With only one integration performed instead of multiple ones, you both save time, money and effort.

API2Cart offers 100+ API methods to let you operate and manipulate eCommerce data as you need it for your business. It includes the ability to retrieve, modify, add, and update the data related to e-store orders, products, prices, customers, shipping details, etc.

API2Cart provides full tech support that will help you solve any issues 24/7.

API2Cart was founded in 2012, and now we work with hundreds of clients from all over the world.

"E-commerce connection swissknife"

Pros: It opens your company to a new range of growth opportunities via ecommerce connection saving you time on per case basis integrations and maintenance.

Cons: To integrate with on premise e-commerces, it requires your clients to install custom pluguins. Nothing bad with that, it is the usual solution, just take it into account when calculating implementation requirements.

"Great product!"

*** * * * 5**.0

D 9/10

Pros: API2Cart has become a very important tool for us. By giving us access to all popular e-commerce platforms backends without having to write custom code to access each of them, has saved us tons of development time. They even have white label plugin option.

Cons: We had a couple of stumbling blocks at the beginning, mostly related to the e-commerce platforms themselves and permissions/settings, but the API2cart manager help us get through everything and now it is working great. We also did not have access to webhook logs, but they recently added this functionality, so now we have everything we need!

Reasons for Choosing API2Cart: The amount of platforms that are supported.

The benefits of using the service

Unified eCommerce API

Connection to API2Cart means immediate integration with all the supported 40+eCommerce platforms and marketplaces

Save time and costs on integrations

With API2Cart, you can save the costs needed for developing separate integrations with eCommerce platforms, paying developers' salaries, maintenance, etc.

Free trial period

We give 30 days to test our API. No functionality is hidden. Create an account and see how API2Cart will work for your business.

Access the data needed

Using API2Cart API methods, your software can access e-store orders, products, customer details, create shipments, etc.

Work with an unlimited number of online stores

API2Cart provides a few pricing plans that allow you to access the data from an unlimited number of stores

Full data security

API2Cart takes serious measures to protect our clients' personal and store information. Sensitive data is protected from unauthorised access.

Usage of API2Cart by shipping and logistic software

Shipping software greatly depends on integration with shopping platforms, as carrying out essential functions requires accessing and processing order, customer and product information from online stores.

In particular, integration with online stores based on various shopping platforms and marketplaces via API2Cart enables your software to do the following:

- get order data from stores
- update order statuses
- update prices
- create shipments
- create shipping labels
- generate tracking numbers for orders
- and perform different other operations

Let's explore all the mentioned cases in details.

How to get order data from stores via API2Cart

There are two ways to learn about new orders in stores.

webhook for order.add event

First is setting the *webhooks for order.add* event to get notified every time a new order is placed. Using webhooks is a much more beneficial way in comparison to polling an API, as it decreases the server load, saves API requests, and provides more up-to-date info.

► <u>order.list</u> <u>method</u>

Another option for tracking new orders is executing *order.list* method once in a while to get a list of products to be imported into your system. Filter orders by create time with *created_from* and *created_to* parameters.

Your software can create shipments and add tracking numbers to orders with the help of <u>order.shipment.update</u> and <u>order.shipment.add</u> methods. Updating order statuses is possible via <u>order.update</u> method.

Image source

Also, with the help of <u>order.shipment.tracking.add</u> method, your shipping software can add tracking numbers and tracking URLs to the shipments. The parameters for request and response codes are provided in the <u>API2Cart documentation</u> for your ready reference.

How to create shipping labels via API2Cart

image source

Here are some basic API2Cart API methods that allow retrieval of order data for creating shipping labels:

- order.info
- customer.info
- order.shipment.list

Let's take a closer look at them.

► <u>order.info method</u>

By executing this method, you can get the details about an order. It contains info such as the customer's name, id, email, billing address, shipping address, status, and other related info.

customer.info method

Using customer.info method, you can retrieve all the customers' details such as customer name, phone, shipping address, and other important info to create shipping labels.

order.shipment.list method

This method allows you to get more detailed info about shipments, order status info and tracking number.

We also provide additional features like the branded plugin, webhooks, live shipping rates, parallel requests, etc. More information about them, you can get from our managers.

Our integration partners

You can develop the integration with API2Cart on your own or you can use our integration partners. Our partners are professional teams of developers, designers, business analysts and managers. They know how to build awesome integrations, plugins, and various business applications. Their customers range from eCommerce entrepreneurs to multinational corporations and government entities.

We have chosen them as our partners because they are:

- well-versed in the API2Cart data structure
- experienced in delivering all kinds of custom eCommerce solutions
- dedicated, really care about making a difference for your business
- focused quality of their projects
- offer excellent support
- a highly professional team you will love to work with

How to get started with API2Cart

You can **<u>schedule a free consultation</u>** with one of our managers and get more information on how to get started with API2Cart, what pricing plan can cover your needs, what functionality we can offer for your shipping and logistic service.

If you want to test API2Cart functionality, you can do it by registering your free account.

You can sign up with Facebook or Google account, or simply enter the necessary fields, such as your corporate email, first and last name, phone number, and password. Then, click "Register".

You can add an unlimited number of your customers' stores and work with them easily. The process of connecting the store to API2Cart depends on the type of shopping platform.

There are two major ones: hosted and open-source. Let's explore how to add the store based on the hosted platform. There are two ways how you can do it.

You can add your store manually to the list below by clicking the "Add store" button.

Add Store				
ID URL	Store Type	Requests	Store Key	
	All			
34886 http://demo.api2cart.com/opencart	OpenCart	2	ed58a22dfecb405a50ea3ea56979360d	🔳 🛋 📥 🖉
Show 10 v entries				Previous 1 N

For example, if you need a store based on Shopify, you have to click "Add store" button, Then, it is needed to paste the store URL, *shopify_api_key*, *shopify_api_password* and press the "Save" button.

Add store			×
Store Type		Shopify	\$
store_url			
	,	A web address of a store that you would like to connect to API2Cart	
Credentials	shopify_api_key 🚯		
set0		Shopify API Key	
Credentials set1	shopify_api_password	rd 🔁	
		Shopify API Password	
	l	Skip verification	
How to connect	Shopify to API2Cart?		
		Add	e

OR, you can add the store automatically via API request using <u>account.cart.add</u> method. You can send a request via Postman or Visit our <u>Interactive Docs</u>.

Once the store is added, you can test all API2Cart API methods for getting, updating and adding the data needed.
